IDENTIFIERS	*Florida

ABSTRACT

This document is the fourth in an annual survey series summarizing data from the Colleges of Education in Florida's nine state universities. At the end of each quarter, each university forwards a report to a central university system office containing information on students who were assigned to schools to fulfill field experience internship requirements. The information contained in these reports consists of (1) the counties in which the student teachers were assigned and (2) the number of student teachers assigned in each, classified according to the student's area of specialization. The data is compiled and compared on a yearly basis in an effort to ascertain current trends in Florida's system of teacher education. Information for the 1974-75 placement pattern is presented in this document through discussion, the display of over 40 tables, and geographic distribution maps. The data for 1974-75 tends to confirm previous trends in that universities, when placing student teachers, use closer geographic concentration in order to provide the maximum cost effectiveness while maintaining quality supervision within the framework of available positions. SURVEY OF STUDENT TEACHING
IN THE
STATE UNIVERSITY SYSTEM OF FLORIDA
1974-1975

INTRODUCTION

At the end of each quarter, the Colleges of Education in Florida's nine state universities forward reports of their students who were assigned to schools to fulfill the field experience internship requirement. The information contained in these reports consists of (a) the counties in which the student teachers were assigned and (b) the number of student teachers assigned in each, classified according to the student's area of specialization. This information is then compiled and compared on a yearly basis in an effort to ascertain current trends in Florida's system of teacher education.

This document is the fourth in this annual survey series, summarizing the data from the nine individual universities on a system-wide basis. It is hoped that consideration of this data as a quantitative foundation will be worthwhile in future manpower projections and program design.

Number of Student Teachers

The general picture of student teachers in the State University System is set forth in Table 1, comparing the individual university totals and each university's per cent of the state total over the three-year period from 1972-73 to 1974-75.

As Table 1 indicates, the number of student teacher placements dropped from the 1973-74 total of 5,678 to a total of 5,509 in 1974-75, a loss of 169 students. Only three of the nine universities, University of Florida, Florida International University, and Florida A & M University, showed numerical increases which are reflected in increases of 2%, 1% and 1% of the state total respectively.

The University of South Florida in 1974-75 retained the number-one spot gained in 1973-74, but lost one point in its percentage of the state total (Table 1). The top three, University of South Florida, Florida State University, and the University of Florida, still combine to equal the 1973-74 total of 55% of the state's student teachers, but their individual percentages changed. The only position rearrangement was Florida A & M University which moved from ninth place to eighth.

Geographic Distribution of Student Teachers

The operating principle has been to try to assign student teaching interns in close enough proximity to district and university personnel to allow for effective supervision during the field experience period. Accordingly, as well as because the universities themselves are located in the larger population concentrations which offer a greater number of opportunities for placement, the trend has been toward very uneven distribution of student teachers within the State of Florida. This year is no exception and, in fact, is somewhat more unevenly distributed than last year (Figure 1).

Last year, 1973-74, in comparison with 1972-73, showed a slight increase in distribution (1973-74 Survey of Student Teaching in the State University System, page 3). In 1974-75, however, only the bigger counties showed an increase: six or more student teachers were reported in 41 counties in 1973-74; in 1974-75, 41 counties had seven or more student teachers with another two counties showing a total of six (Figure 1). The number of counties with one but less than seven student teachers decreased from 20 to 14. The number of counties with no student teachers doubled, from six to twelve; seven of those twelve counties (Franklin, Suwanee, Gilchrist, Flagler, Indian River, Charlotte and Collier) were included in the one to six student teacher category last year. The six top-ranking counties (Hillsborough, Alachua, Dade, Leon, Pinellas and Broward), although not identical to the top six of 1973-74, again accounted for nearly 60 per cent of the student teachers assigned in 1974-75 (Table 2).

Tables 3A and 3B confirm that a county's student teacher population is principally determined by the proximity of a university. For example, 94.17% of the student teachers assigned in Hillsborough County came from the University of South Florida; a startling 99.86% of the student teachers in Alachua County were assigned by the University of Florida; and Florida State University and Florida A & M University, located in Leon County, supplied all but two of that county's 572 student teachers.

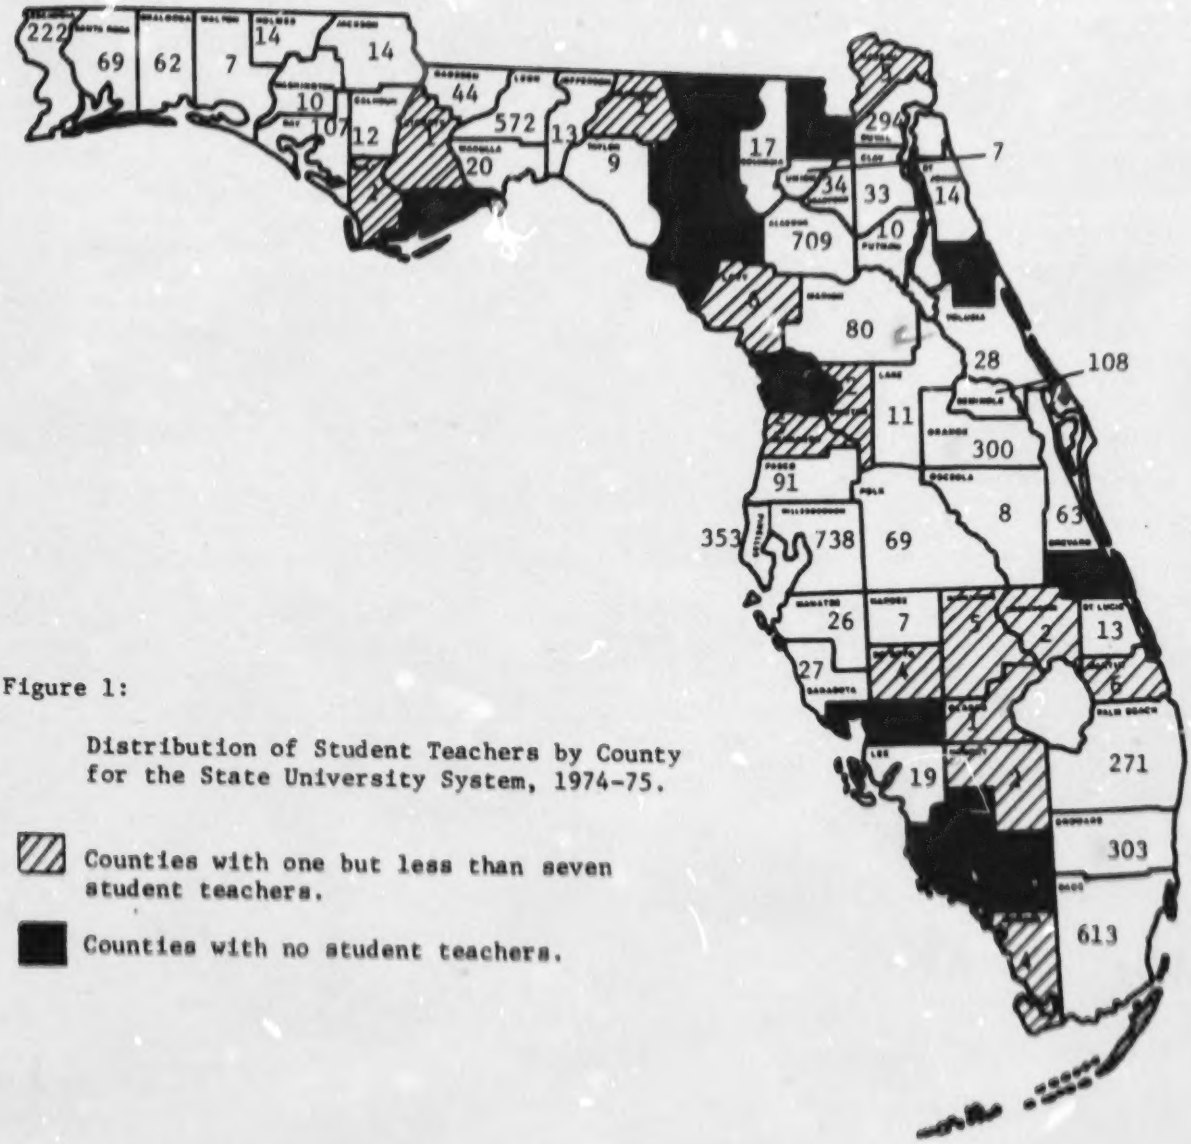

Figure 1:

Distribution of Student Teachers by County for the State University System, 1974-75.

Counties with one but less than seven student teachers.

Counties with no student teachers.

* STATE TOTAL: 5,509

Again in 1974-75, the older institutions, Florida A & M University, Florida State University, and the University of Florida, reported distribution nearly state-wide in scope (Figures 3, 4 and 5 in Appendix A). The newer universities (Figures 6 - 11 in Appendix A) continued in their more regional distribution with the notable exception of the University of South Florida (Figure 6) which placed students in 15 counties.

Florida State University was again the most diversified, distributing 90 per cent of its student teachers into 14 of the top 20 counties ranked in order of the number of student teachers placed (Table 4). In contrast, the University of North Florida was represented in only one of the top 20, with 84 per cent of its total in Duval County. All the other universities fell within these two extremes of the distribution spectrum.

Distribution of Student Teachers Across Subject Areas

Out of 30 areas of specialization tabulated, nearly 96 per cent of the student teachers placed in 1974-75 did their student teaching in one of 17 areas (Tables 5A and 5B). Areas such as Special Education, Reading, Distributive Education, and Vocational Education accounted for the remaining 4.07 per cent of the total. Over 53 per cent of the state total specialized in one of three areas: Elementary and Early Childhood Education, Physical Education and Health, and Social Science Education.

Distribution within subject areas indicated a certain degree of program uniformity: 14 of the 30 areas were represented in six or more of the nine institutions, but percentages varied. For example, all nine universities reported student teachers in Elementary and Early Childhood Education, with five of the nine reporting 9 per cent or more of the state total. In other areas, distribution was more uneven. For example, only four universities reported student teachers in Vocational-Technical Education, with 82 per cent of those student

[1]Graduate level only. [2]Graduate level only. KEY: N = Number % = Percent of SUBJECT total.

teachers assigned by the University of West Florida and the University of North Florida.

Elementary and Early Childhood Education was still overwhelmingly the largest category, even though this year's 35.02 per cent of the state total represents a drop from the 37.48 per cent in 1973-74.

Tables 6 - 35 (Appendix B) trace the number of student teachers in each reported subject area assigned in each county by the individual universities, as well as the county totals in each subject and the county percentage of the state total in each subject area. Elementary and Early Childhood Education was again the largest category, with its student teachers assigned in 50 Florida counties and three out-of-state locations (Tables 10A and 10B). The top five counties in this area are the same as last year, but their order is rearranged: Alachua County led the group with 271, or 14 per cent of the state total of 1,929, followed by Hillsborough (237 or 12%), Leon (222 or 12%), Dade (201 or 10%), and Duval (128 or 7%).

Three other subject areas showed student teachers assigned in 30 or more counties: Social Science (Table 27), 37 Florida counties and three out-of-state locations; Physical Education and Health (Table 24), 31 counties and one out-of-state location; and English (Table 11), 30 Florida counties and one out-of-state location.

Students in seven subject areas were placed in 20 to 29 counties: Art Education (Table 7), 28 counties and one out-of-state location; Music Education (Table 23), 26 counties; Math Education (Table 21), 25 counties; Science (Table 26), 23 counties; Exceptional Child Education of the Mentally Retarded (Table 13), 23 counties; Foreign Language (Table 15), 21 Florida counties and two out-of-state locations; and Business Education (Table 8), 22 Florida counties.

Interns in another seven areas were assigned in 10 to 19 counties: Industrial Arts (Table 19); Library Science (Table 20); Specific Learning Disa-

bilities (Table 14); Home Economics (Table 17); Speech (Table 32); Distributive Education (Table 9); and Speech Pathology and Communicative Disorders (Table 33). The remaining twelve subject areas, or 40 per cent of the total number of subject areas had students assigned in fewer than ten counties.

SUMMARY

In the 1972-73 academic year, the nine state universities placed a total of 4,936 student teachers; in 1973-74, a total of 5,678; and in this past year, 1974-75, a total of 5,509. Each university's share of the 1974-75 total is indicated in the following percentages: University of South Florida, 21%; Florida State University, 18%; University of Florida, 16%; Florida International University, 10%; Florida Atlantic University, 9%; University of West Florida, 8%; Florida Technological University, 7%; Florida A & M University, 6%; and the University of North Florida, 5%. More than half (55%) of the state total for 1974-75 were placed by the top three, University of South Florida, Florida State University and University of Florida.

Ninety-six per cent of the student teachers specialized in one of 17 areas, while more than 53 per cent came from the three areas of Elementary and Early Childhood, Physical Education and Health, and Social Sciences. Some subject areas were divided rather uniformly, such as Elementary and Early Childhood Education with five of the nine institutions reporting nine per cent or more of the state total. Other more specialized subject areas were concentrated in fewer institutions.

Counties in which universities are located, as well as those immediately adjacent, confirm the previous trend toward a heavier student teacher concentration. The counties which contain universities (Hillsborough, Alachua, Dade, Leon, Orange, Duval, Palm Beach and Escambia) accounted for 67.79 per cent of the state total. Also the percentage of student teachers from a particular university in each county is usually determined by that university's location in relation to the county. Thus, 94.17 per cent of the student teachers in Hillsborough County came from the University of South Florida, 99.86 per cent in Alachua County came from the University of Florida, and 99.65 per cent of the student teachers in Leon County came from Florida State University or Florida A & M University.

Thus the placement pattern in 1974-75 tends to confirm previous trends in that universities use closer geographic concentration in order to provide the maximum cost effectiveness while maintaining quality supervision control within the framework of available positions for placement of student teachers.
